InSure® FIT™
Fecal Immunochemical Test

Colorectal Cancer Screening
That's Easier to Live With

InSure® Fecal Immunochemical Test (FIT™)

Test provides high sensitivity and ease of use with a simple, water-based collection method designed to be more patient-friendly. The patented brush sampling replaces unpleasant fecal collection or smearing. No dietary or medicinal restrictions, enhanced specificity and sensitivity for more productive colonoscopies. The InSure® FIT™ is based on the immunochemical detection of human hemoglobin (Hb) as an indicator of blood in the stool. The assay uses a monoclonal antibody to capture Hb on a test strip during test development. Since globin does not survive passage through the upper gastrointestinal (GI) tract, the presence of globin in the stool indicates bleeding in the colon or rectum. Clinical studies have demonstrated high sensitivity and specificity of the InSure® FIT™ test in colorectal cancer screening.

When quality is at the CORE of every decision you make...

Trust Hemocult ICT—the only immunochemical fecal occult blood test clinically tested over an extended duration and proven to work. Our dry-slide process has provided excellent proven results for over 40 years.

Excellent 14-day stability—developed with dry-slide technology, which increases stability of the sample—allowing for multiple-day collection and necessary transit/development time.

Higher sensitivity and specificity—clinically proven to have a relative sensitivity of 100% and, apparent specificity of 99.1%.

No drug or dietary restrictions—Hemocult ICT is specific to intact human hemoglobin—eliminating interactions from red meat, Vitamin C, and other, factors that lead to false positives.

The right choice—meetings the American Cancer Society and the U.S. Task Force for Colorectal Cancer (CRC) Foundation recommendation of multiple-day testing for CRC.

pHizatest™ Nitrazine Indicator Paper
 Compare to NitraTest™
 Designed for the *in vitro* determination of body-fluid pH in the 4.5–7.5 range. Typically used to measure vaginal pH, including detecting amniotic fluid in late-term pregnancy, a sign of premature amniotic-sac rupture, nitrazine-indicator paper is also used to aid in diagnosing bacterial vaginosis, measuring ocular pH, and more. Packaged in a familiar, convenient, and easy-to-use dispenser and includes a color chart. Each roll provides approximately 100 tests.

LashesMD™ is an eyelash and eyebrow enhancer that is available to Henry Schein from Folicula Labs.

This product sets itself apart from other lash enhancers due to its lack of prostaglandin, a lipid compound that can change eye color and darken the skin of the eyelids. Also, it is the first professional grade eyelash enhancer available without a prescription that produces pharmaceutical-grade results.
