

Exclusive Benefits for You and Your Practice

Best-in-Class Medical, Surgical & Pharmaceutical Purchasing Program

With the AMA's exclusive Medical Supply Program, Members have access to a comprehensive, high-quality, high-value portfolio of medical disposable, pharmaceutical, diagnostic, and equipment products.

Henry Schein's Practice Solutions

Tap into an unrivaled portfolio of solutions designed to help your practice improve patient care and operational efficiency. Programs include free Rx Samples Service, DxRx Solutions, Privileges Rewards, and much more.

Enhance CPT Network

Obtain the most recent and accurate coding advice, including a database of over 5000 commonly asked coding questions, ability to search CPT codes/relative value by geographic location and receive six free coding inquires (\$480 value).

Personal Assistance from the AMA Practice Management Center

- Fair contract
- Managing data and profile
- Accurate payment
- Establishing and updating fee schedules
- Practice efficiency

National Managed Care Database

Learn how to analyze and negotiate contracts with insurers and ensure that managed care organizations comply with state law and regulations that protect your practice against unfair business practices.

Rely on us for...

Trusted Advisor

Our knowledgeable Sales Consultants offer you the utmost attention and are specially trained to help identify ways to enhance your practice.

Price Integrity

We are highly competitive with our pricing. We strive to maintain prices, develop purchasing plans, and deliver the best value for your practice.

Guaranteed Fast Delivery

Orders received by 5pm local time are shipped the same day. Your products arrive within 24–48 hours in most areas.

Vaccine, Pharmaceutical & Diagnostic Solutions

We have relationships with major manufacturers and can supply every adult and pediatric vaccine recommended by the ACIP.

In addition, we can provide all of your flu vaccine needs with our Worry-Free Guarantee Flu Program!

Our pharmaceutical and diagnostic solutions include brand names as well as a complete line of generics and Henry Schein Brand options for added value.

Practice Solutions

We provide a complete array of services, from technology solutions to practice marketing, that are designed to help you achieve your practice goals.

INDICATION

Nascobal® (Cyanocobalamin, USP) Nasal Spray is indicated for the maintenance of normal hematologic status in pernicious anemia patients who are in remission following intramuscular vitamin B₁₂ therapy and who have no nervous system involvement. Nascobal Nasal Spray is also indicated as a supplement for other vitamin B₁₂ deficiencies including: dietary deficiency of vitamin B₁₂ occurring in strict vegetarian diets; malabsorption of vitamin B₁₂ resulting from conditions including HIV infection, AIDS, and Crohn's disease; inadequate secretion of intrinsic factor resulting from lesions that destroy the gastric mucosa and other conditions associated with gastric atrophy including multiple sclerosis, HIV infection, AIDS, certain endocrine disorders, iron defi ciency, and subtotal gastrectomy; total gastrectomy; competition for vitamin B₁₂ by intestinal parasites or bacteria; and inadequate utilization of vitamin B₁₂ that may occur if antimetabolites for the vitamin are employed in the treatment of neoplasia.

IMPORTANT SAFETY INFORMATION

Nascobal® (Cyanocobalamin, USP) Nasal Spray is contraindicated in patients with sensitivity to cobalt and/or vitamin B₁₂ or any component of the medication. If a patient is not properly maintained with Nascobal Nasal Spray, intramuscular vitamin B₁₂ is necessary. Vitamin B₁₂ concentrations must be monitored.

Patients with pernicious anemia should be instructed that they will require weekly administration of Nascobal Nasal Spray for the remainder of their lives. Failure to do so will result in return of the anemia and in development of incapacitating and irreversible damage to the nerves of the spinal cord. Patients with early Leber's disease (hereditary optic nerve atrophy) who were treated with vitamin B₁₂ suffered severe and swift optic atrophy. Vitamin B₁₂ defi ciency may suppress the signs of polycythemia vera. Treatment with vitamin B₁₂ may unmask this condition. Hypokalemia and sudden death may occur in severe megaloblastic anemia which is treated intensely with vitamin B₁₂.

Side effects thought to be related to Nascobal use are usually mild and include headache, nausea, and rhinitis.

Please see adjacent brief summary of prescribing information.

*In a separate study Nascobal nasal spray and Nascobal nasal gel were bioequivalent3

Nascobal® Nasal Spray

(Cvanocobalamin, USP)

500 mcg/spray

BRIEF SUMMARY: FOR COMPLETE DETAILS, PLEASE SEE FULL PRESCRIBING INFORMATION

INDICATIONS AND USAGE

Nascobal® Nasal Spray is indicated for the maintenance of normal hematologic status in pernicious anemia patients who are in remission following intramuscular vitamin B_{12} therapy and who have no nervous system involvement Nascobal Nasal Spray is also indicated as a supplement for other vitamin B_{12} deficiencies, including:

- I. Dietary deficiency of vitamin B₁₂ occurring in strict vegetarians (Isolated vitamin B₁₂ deficiency is very rare).
- II. Malabsorption of vitamin B₁₂ resulting from structural or functional damage to the stomach, where intrinsic factor is secreted, or to the ileum, where intrinsic factor facilitates vitamin B₂ absorption. These conditions include HIV infection, AIDS, Crohn's disease, tropical sprue, and nontropical sprue (idiopathic steatorrhea, gluten-induced enteropathy). Folate deficiency in these patients is usually more severe than vitamin B₁₂ deficiency.
- III. Inadequate secretion of intrinsic factor, resulting from lesions that destroy the aastric mucosa Initiate qualities declared in Himitist Circle, resuming non resions in an destiny line (gastinct nucleous) (ingestion of corrosives, extensive neoplosia), and a number of conditions associated with a variable degree of gastric atrophy (such as multiple sclerosis, HIV infection, AIDS, certain endocrine disorders, iron deficiency, and subtoal gastrectomy). Total gastrectomy always produces vitamin Bz, deficiency. Structural lesions leading to vitamin Bz; deficiency include regional ileitis, ileal resections, malianancies, etc.
- IV. Competition for vitamin B₁₂ by intestinal parasites or bacteria. The fish tapeworm (Diphyllobothrium latum) absorbs huge quantities of vitamin B 12 and infested patients often have associated gastric atrophy. The blind loop syndrome may produce deficiency of vitamin B₁₂ or folate.
- V. Inadequate utilization of vitamin B₁₂. This may occur if antimetabolites for the vitamin are employed in the treatment of neoplasia.

It may be possible to treat the underlying disease by surgical correction of anatomic lesions leading to small bowel bacterial overgrowth, expulsion of fish tapeworm, discontinuation of drugs leading to vitamin malabsorption (see "Drug/Laboratory Test Interactions"), use of a gluen free diel in nontropical sprue, or administration of antibiotics in tropical sprue. Such measures remove the need for long-term administration of vitamin B₁₂.

Requirements of vitamin B_{12} in excess of normal (due to pregnancy, thyrotoxicosis, hemolytic anemia, hemorrhage, malignancy, hepatic and renal disease) can usually be met with intranasal or oral supplementation.

Nascobal Nasal Spray is not suitable for vitamin B₁₂ absorption test (Schilling Test)

Sensitivity to cobalt and/or vitamin B₁₂ or any component of the medication is a contraindication

WARNINGS

Patients with early Leber's disease (hereditary optic nerve atrophy) who were treated with vitamin B_{12} suffered severe and swift optic atrophy.

Hypokalemia and sudden death may occur in severe megaloblastic anemia which is treated intensely with vitamin B₁₂. Folic acid is not a substitute for vitamin B₁₂ although it may improve vitamin B₁₂ deficient megaloblastic anemia. Exclusive use of folic acid in freating vitamin B₁₂-deficient megaloblastic anemia. and irreversible neurologic damage.

Anaphylactic shock and death have been reported after parenteral vitamin B₁₂ administration. No such reaction have been reported in clinical trials with Nascobal Nasal Spray or Nascobal (Cyanocobalamin, USP) Nasal Gel.

Blunted or impeded therapeutic response to vitamin B₁₂ may be due to such conditions as infection, uremia, drugs having bone marrow suppressant properties such as chloramphenicol, and concurrent iron or folic acid deficiency.

PRECAUTIONS

GENERAL

An intradermal test dose of parenteral vitamin B₁₂ is recommended before Nascobal Nasal Spray is administered to patients suspected of cyanocobalamin sensitivity. Vitamin B₁₂ deficiency that is allowed to progress for longer than three months may produce permanent degenerative lesions of the spinal cord. Doses of folic acid greater than 0.1 mg per day may result in hematologic remission in patients with vitamin B₁₂ deficiency. Neurologic manifestations will not be prevented with folic acid, and if not treated with vitamin B₁₂, irreversible damage will result. Doses of vitamin B₁₂ exceeding 10 mag daily may produce hematologic response in patients with folded deficiency, Indiscriminate daministration may mask the true diagnosis. The validity of diagnostic Vitamin B₁₂ or folic acid blood assays could be compromised by medications, and this should be considered before relying on such tests for therapy. Vitamin B_{12} is not a substitute for folic acid and since it might improve folic acid deficient megaloblastic anemia, indiscriminate use of vitamin $B_{\rm p}$; could mask the true diagnosis. Hypokalemia and thrombocytosis could occur upon conversion of severe megaloblastic to normal erythropoiesis with vitamin B_{12} therapy. Therefore, serum potassium levels and the platelet count should be monitored carefully during therapy. Vitamin B_{12} deficiency may suppress the signs of polycythemia vera. Treatment with vitamin B_{12} may unmask this condition. If a patient is not properly maintained with Nascobal Nasal Spray, inframuscular vitamin B_{12} is necessary for adequate freatment of the patient. No single regimen fits all cases, and the status of the patient botserved in follow-up is the final criterion for adequacy of therapy. The effectiveness of Nascobal Nasal Spray in patients with nasal congestion, allegic thinitis and upper respiratory infections has not been determined. Therefore, treatment with Nascobal Nasal Spray should be deferred until symptoms have subsided.

Hematocrit, reticulocyte count, vitamin B₁₂, folate and iron levels should be obtained prior to treatment. If folate levels are low, folic acid should also be administered. All hematologic parameters should be normal when beginning treatment with Nascobal Nasal Spray.

Vitamin B₁₂ blood levels and peripheral blood counts must be monitored initially at one month after the start of treatment with Nascobal Nasal Spray, and then at intervals of 3 to 6 months.

A decline in the serum levels of B_{12} after one month of treatment with B_{12} nasal spray may indicate that the dose may need to be adjusted upward. Patients should be seen one month after each dose adjustment; continued low levels of serum B₁₂ may indicate that the patient is not a candidate for this mode of administration

Patients with pernicious anemia have about 3 times the incidence of carcinoma of the stomach as in the general population, so appropriate tests for this condition should be carried out when indicated.

DRUG/LABORATORY TEST INTERACTIONS

Persons taking most antibiotics, methotrexate or pyrimethamine invalidate folic acid and vitamin B_{12} diagnostic blood assays. Colchicine, para-aminosalicylic acid and heavy alcohol intake for longer than 2 weeks may produce malabsorption of vitamin B_{12} .

CARCINOGENESIS, MUTAGENESIS, IMPAIRMENT OF FERTILITY

Long-term studies in animals to evaluate carcinogenic potential have not been done. There is no evidence from long-term use in patients with pemicious anemia that vitamin B_{12} is carcinogenic. Pernicious anemia is associated with an increased incidence of carcinoma of the stomach, but this is believed to be related to the underlying pathology and not to treatment with vitamin B₁₂.

Pregnancy Category C: Animal reproduction studies have not been conducted with vitamin B₁₂. It is also not known whether vitamin B₁₂ can cause fetal harm when administered to a pregnant woman or can affect reproduction capacity. Adequate and well-controlled studies have not been done in pregnant women. However, vitamin B₁₂ is an essential vitamin and requirements are increased during pregnancy. Amounts of vitamin B₁₂ that are recommended by the Food and Nutrition Board, National Academy of Science - National Research Council for pregnant women should be consumed during pregnancy.

NURSING MOTHERS

Vitamin B_{12} appears in the milk of nursing mothers in concentrations which approximate the mother's vitamin B_{12} blood level. Amounts of vitamin B_{12} that are recommended by the Food and Nutrition Board, National Academy of Science-National Research Council for locating women should be consumed during location.

Intake in pediatric patients should be in the amount recommended by the Food and Nutrition Board, National Academy of Science-National Research Council

ADVERSE REACTIONS

The incidence of adverse experiences described in the Table below are based on data from a short-term clinical Trial in vitamin B₁₂ deficient patients in hematologic remission receiving Nascobal Gel for Intranasal Administration (N=24) and intramuscular vitamin B₁₂ (N=25). In the pharmacokinetic study comparing Nascobal Nasal Spray scobal Nasal Gel, the incidence of adverse events was similar

Table: Adverse Experiences by Body System, Number of Patients and Number of Occurrences by Treatment Following Intramuscular and Intranscrapt Administration of Occurrences by Treatment

		Number of Pa	tients (Occurrences)
Body System	Adverse	Vitamin B ₁₂	Intramuscular

	Paresthesia	1(1)	1 (1)
Respiratory System	Dyspnea	0 (0)	1 (1)
	Rhinitis	1 (1)*	2 (2)

^aSore throat, common cold *There may be a possible relationship between these adverse experiences and the study drugs. These adverse experiences could have also been produced by the patient's clinical state or other

The intensity of the reported adverse experiences following the administration of Nascobal Gel for Intrangal Administration and inframuscular vitamin B₁₂ were generally mild. One patient reported severe headache following intramuscular dosing. Similarly, a few adverse experiences of moderate intensity were reported following inframuscular dosing (two headaches and rhinitis; one dyspepsia, arthritis, and dizziness), and dosing with Nascobal Gel for Infranasal Administration (one headache, infection, and paresthesia).

The majority of the reported adverse experiences following dosing with Nascobal Gel for Intranasal Administration and inframuscular vitamin B_{12} were judged to be intercurrent events. For the other reported adverse experiences, the relationship to study drug was judged as "possible" or "remote". Of the adverse experiences judged to be of "possible" relationship to the study drug, anxiety, incoordination, and nervousness were reported following intramuscular vitamin B_{12} and headache, nausea, and rhinitis were reported following dosing with Nascobal Gel for Intranasal Administration.

The following adverse reactions have been reported with parenteral vitamin B₂:

Generalized: Anaphylactic shock and death (See Warnings and Precautions).

Cardiovascular: Pulmonary edema and congestive heart failure early in treatment; peripheral vascular thrombosis.

Hematological: Polycythemia vera. Gastrointestinal Mild transient diarrhea Itching; transitory exanthema Dermatological: Miscellaneous: Feeling of swelling of the entire body

OVERDOSAGE

No overdosage has been reported with Nascobal Nasal Spray, Nascobal (Cyanocobalamin, USP) Gel for Intranasal

Administration or parenteral vitamin B

DOSAGE AND ADMINISTRATION

The recommended initial dose of Nascobal Nasal Spray is one spray (500 mcg) administered in ONE nostril once weekly. Nascobal Nasal Spray should be administered at least one hour before or one hour after ingestion of hot foods or liquids. Periodic monitoring of serum B₁₂ levels should be obtained to establish adequacy of therapy,

Priming (Activation) of Pump
Before the first dose and administration, the pump must be primed. Remove the clear plastic cover and the plastic safety clip from the pump. To prime the pump, place nozzle between the first and second finger with the thumb on the bottom of the bottle. Pump the unit firmly and quickly until the first appearance of spray. Then prime the pump an additional 2 times. Now the nasal spray is ready for use. The unit must be re-primed before each dose. Prime the pump <u>once</u> immediately before each administration of doses 2 through 4.

INFORMATION FOR PATIENTS

Potients with pernicious anemia should be instructed that they will require weekly intranasal administration of Nascobal Nasal Spray for the remainder of their lives. Failure to do so will result in return of the anemia and in development of incapacitating and irreversible damage to the nerves of the spinal cord. Also, patients should be warned about the danger of taking folic acid in place of vitamin B₁₂, because the former may prevent anemia but allow progression of subacute combined degeneration of the spinal cord.

(Hot foods may cause nasal secretions and a resulting loss of medication; therefore, patients should be told to administer Nascobal Nasal Spray at least one hour before or one hour after ingestion of hot foods or liquids)

A vegetarian diet which contains no animal products (including milk products or eggs) does not supply any vitamin B₁₂. Therefore, patients following such a diet should be advised to take Nascobal Nasal Spray weekly. The need for vitamin \mathbf{B}_{12} is increased by pregnancy and lactation. Deficiency has been recognized in infants of vegetarian mothers who were breast fed, even though the mothers had no symptoms of deficiency at the time.

Because the nasal dosage forms of Vitamin B_{12} have a lower absorption than intramuscular dosage, nasal dosage forms are administered weekly, rather than the monthly intramuscular dosage. As shown in the Figure above, at the end of a month, weekly nasal administration results in significantly higher serum Vitamin B_{12} levels than after intramuscular administration. The patient should also understand the importance of returning for follow-up blood tests every 3 to 6 months to confirm adequacy of the therapy.

Careful instructions on the actuator assembly, removal of safety clip, priming of the actuator and nasal administration of Nascobal Nasal Spray should be given to the patient. Although instructions for patients are supplied with individual bottles, procedures for use should be demonstrated to each patient.

To report suspected adverse reactions, contact Par Pharmaceutical Companies, Inc. at 1-800-828-9393

- Flexible specimen-collection options

(**227-0024**)20/box Contains: 20 test cassettes, 1 developer, 1 of ea control (negative & positive), 20 sample pipettes & 20 capillary tubes. CPT® Codes: Whole blood: 86308QW†; Serum: 86308†

OSOM® Mono Test

Simple in-office test for the detection of mononucleosis.

- · Easy to use
- Two-color results in 5 minutes
- Includes 2 additional tests for external QC testing

 100% sensitivity, 96% specificity
- Clinical studies included children 4 and up
- CLIA waived for whole blood

(327-3297).....27/box CPT® Code: 86308QW+

✓ HENRY SCHEIN®

ONESTEP+ MONO CASSETTE TEST

A rapid chromatographic-immunoassay for the qualitative detection of infectious mononucleosis in whole blood, serum, or plasma.

- CLIA waived
- Finger stick or collection tube
- Room-temperature storage
- Includes controls

Complete Kit

(900-4070)20/box

Contains: 20 pouched test devices with disposable sample droppers; disposable, heparinized capillary tubes with dispensing bulb; 1 of each control (positive & negative); 1 sample buffer; 1 procedure card & 1 package insert. CPT® Code: 86308QW1

<u>no age</u> RESTRICTIONS

✓ HENRY SCHEIN® **ONE STEP** PRO+ MONONUCLEOSIS **TEST KIT**

- CLIA waived for whole blood
- · No age restrictions
- · Measures heterophile antibodies in whole blood, serum and plasma
- · Uses best technology of bovine derivatives, which eliminate cross reactivity
- Room temperature or refrigerated storage
- Two internal controls exist to avoid additional cost and ensure good laboratory practice
- Only 25 µL blood needed

Mono Test Kit

(112-5547)ea

Contains: 20 test devices, 1 developer solution, 1 negative control, 1 positive control, 40 sample transfer pipettes (20 for serum/plasma & 20 for whole blood), 1 procedure card & 1 package insert

CPT® Codes: 86308QW+ (Whole Blood) / 86308+ (Serum/Plasma)

ICON® Mono Test Kit

Approved for testing on all ages. Combines fingerstick whole-blood convenience with EIA membrane technology for fast, accurate results. Uses direct solid-phase immunoassay technology for early qualitative detection of IM heterophile antibodies in whole blood, serum, or plasma. Serum/plasma is moderately complex.

- Whole-blood-test waived
- 99.9% relative sensitivity and 98.8% relative specificity of serum/plasma
- 98.3% relative specificity of wholeblood assay

(111-7123)30/box

Contains: 30 test cassettes, 1 developer solution, 1 of each control (negative & positive), 1 bulb & capillary tubes.

13

CPT® Code: 86308†

InSure® FIT™ Fecal Immunochemical Test (FIT)

Test provides high sensitivity and ease of use with a simple, water-based collection method designed to be more patientfriendly. The patented brush sampling replaces unpleasant fecal collection or smearing. No dietary or medicinal restrictions, enhanced specificity and sensitivity for more productive colonoscopies. The InSure® FIT™ is based on the immunochemical detection of human hemoglobin (Hb) as an indicator of blood in the stool. The assay uses a monoclonal antibody to capture Hb on a test strip during test development. Since globin does not survive passage through the upper gastrointestinal (GI) tract, the presence of globin in the stool indicates bleeding in the colon or rectum. Clinical studies have demonstrated high sensitivity and specificity of the InSure® FIT™ test in colorectal cancer screening.

- 87% sensitivity for colorectal cancer*
- 98% specificity*
- 66% increase in patient compliance vs. a guaiac-based fecal occult blood test (gFOBT) was found in one study*
- No handling/smearing of dry, solid fecal materials*
- CPT® Code 82274†
- *Data on file.

The perfect pair for testing diabetic patients.

HbA1c and Microalbumin are both available for point-of-care (POC) testing.

Answers for life.

The perfect pair (HbA1c & Microalbumin for POC testing):

- Perform quantitative urine microalbumin, creatinine, and albumin-to-creatinine ratio tests, and CLIA-waived HbA1c for managing diabetes on one analyzer: the DCA Vantage® analyzer
- The DCA Vantage analyzer has over 15 years of proven performance in the point-of-care (PoC) testing segment and over 100 peer reviewed articles to provide confidence in test results
- As another option, the CLINITEK Status® analyzer can provide a CLIA-waived, semi-quantitative urine microalbumin, creatinine, and albumin-to-creatinine ratio result, in about a minute
- You can use both the DCA Vantage and the CLINITEK Status analyzers in CLIA-waived offices for monitoring the HbA1c and microalbumin levels of patients with diabetes, as recommended by the ADA

CoaguChek XS® System

PT/INR Monitoring Solution

The next generation in point-of-care prothrombotin (PT) and international normalized ratio (INR) testing, this new system uses exclusive smart technology to help ensure accurate results and offers the flexibility and control that healthcare professionals need to confidently manage a wide range of anticoagulated patients. It is the only system to perform onboard quality control and determine patient results in a single test chamber.

- CLIA waived
- Neutralizes therapeutic levels of heparin and LMWH
- INR corrected for hematocrit within specified range; manage a broad array of patients with a single device
- Small sample size (10 µL) for easy dosing
- Strip allows dosing from either top or side for simple blood application
- · Small, battery-powered, handheld meter for portability and efficiency
- · New onboard controls; no external QC necessary
- · Auto-on with strip insertion and auto-off capabilities
- 18-month strip shelf life; no refrigeration needed

Blue Max™ Electrodes by Cardiac Science

For Monitoring and Resting ECGs

- · Highly conductive wet gel for clean tracings
- · Minimal baseline wandering
- Unique offset snap connection reduces motion artifact during stress testing
- Specially formulated adhesive stays in place

#097001, Vinyl, Offset Snap, 40mm (120-4000)......25/bag

Foam, 30mm (120-9305).....10/pkg #097002, Foam, Offset Snap, 50mm

(130-9743)25/bag #015-0630-00, SUPAtab, Wet Gel

- · Simplicity of operation; quick and easy to set up
- · Pressure regulation: regulates the output pressure to prevent damage to the tympanic membrane or ossicular chain

 • Portable
- Temperature indicator/control: light will turn green when water is at body temperature and will automatically turn off if water gets too hot
 • Suctioning action: reduces messy outflow
 • Multifunctional disposable tip: provides a
- seal at ear canal; has an outflow channel to direct water back to drain, and a filter in tip to collect cerumen, thus allowing practitioner to see when cleaning is complete; can be used on children and adults
- 1-year warranty

With enhanced water pressure and unique Hydrovac action, this award-winning system is the obvious irrigation choice for any practice. It eliminates messy overflow by automatically dislodging, removing, and disposing of earwax, making it the easiest, cleanest, most effective way to remove cerumen.

BURDICK

Assurance 50° "Fade-Resistant" Papers

Single Channel, Red Grid

Unique line of thermal recording media. Look and feel is similar to standard thermal charts, but difference is in acid-free base paper and patented chemical thermal coatings. Combination of these 2 elements works to deliver 50 years of ECG image life without worry or fading. Thermal chart contaminants such as UV light, PVC, alcohol, adhesive tape, and electrode creams are no longer of concern. No special care or handling is required. Guarantee clear, indelible original records. year after year.

ETHICON[®]

DERMABOND® High-Viscosity Topical Skin Adhesives

Secure skin-closure alternative for easily approximated skin edges of incisions and lacerations that otherwise would be closed with sutures, staples, or skin strips. 2-octyl cvanoacrylate adhesive gives the strength of approximated healed tissue at 7 days in less than 3 minutes. Ideally suited for long incisions and where a great deal of fluid control is required. Designed for topical repair of lacerations and topical closure of incisions. Also ideal for the face, trunk, and limbs. Sets in approximately 1 minute, reducing need for local anesthetic and patient restraint. Vial is comprised of a crushable glass ampule contained within a plastic vial with attached applicator tip. ProPen contains a plastic ampule within a pen-like device.

- · Better control over adhesive placement
- Easier application
- Reduced runoff
- · Less chance of unwanted adhesion
