PolyMem®

The Proven Multifunctional Primary Dressings

PolyMem Wound Care Dressings Are Latex Free

Primary Dressings

Minimizes pain and disruption of newly forming tissue.

Perforated for ease of use (Wic only).

Wide range of application.

Reduces need to cleanse wound bed during dressing changes.

Will not stick to the wound bed while maintaining integrity of healing tissue.

Non-adherent.

Expands up to one-third as wound fluid.

Facilitates management of cavity wounds.

Quickly absorbs and holds up to 10 times weight (Wic and Wic Silver) or can allow the dressing to draw fluid to the reservoir in the dressing (Wic Silver Rope).

Fast super absorbent wicking.

Easy, pain-free application and removal.

Will not dehydrate wound bed.

Soft and pliable, conforming to wound shape.

Reinforced for added strength (Wic Silver Rope).

Small particle silver provides an antimicrobial action of the silver formulation on relevant, representative organisms.

Helps relieve wound pain and improve comfort.

Clinician can add sterile water or saline to make the dressing a faster moisture donor, or can allow the dressing to draw fluid to the reservoir in the dressing.

Seed dressing fills cavity wound.

Antimicrobial actions of the silver formulation on relevant, representative organisms. The organisms chosen demonstrate broad-spectrum antimicrobial effects of PolyMem on the wound bed.

Candida albicans (ATCC# 10231), Staphylococcus aureus (MRSA) (ATCC# 33591) and Staphylococcus aureus (ATCC# 6538). The organisms chosen demonstrate broad-spectrum antimicrobial effects of PolyMem on the wound bed.

Dramatic pain relief.

PolyMem’s patented formulation is especially designed for tunneling and cavity wounds.

PolyMem Wic® wound filler products belong to an innovative class of multifunctional wound care dressings. PolyMem dressings effectively cleanse, fill, absorb and moisten wounds throughout the healing continuum. No other single wound dressing combines these four key wound healing capabilities like the PolyMem formulation dressings.

As PolyMem Wic, PolyMem Wic Silver® and PolyMem Wic Silver Rope wound fillers absorb fluid, they each expand about one-third within the wound tunnel or cavity to fill dead space. The polymeric membrane establishes and maintains a clean and moisturized wound bed. The moisture-balancing actions of the dressings are able to absorb impressive amounts of moisture and deliver moisture as demanded by the exposed tissues in the wound.

PolyMem and Pain Relief
The family of PolyMem dressings help relieve wound pain and reduce the spread of inflammation into surrounding uninjured tissues without interfering with the robust localized inflammatory response required for healing.1,2,3

PolyMem Silver Formulation
PolyMem Wic Silver and PolyMem Wic Silver Rope have small particle silver added to the PolyMem formulation. When you use the PolyMem Silver formulation on a wound, moisture and fluids in the wound bed are absorbed into the dressing, releasing silver ions, which protect the dressing from microbial contamination. PolyMem Silver dressings are the most absorptive of the silver containing dressings while also helping to reduce the risk of damaging healthy cells within the wound.4 In tests for antimicrobial effectiveness using in vitro testing methods, PolyMem Silver formulation dressings killed at least 99.9% of the entire population of each organism tested.* The bacteria and fungi tested are representative of organisms found in clinical settings.

PolyMem Wic and PolyMem Wic Silver can effectively replace common categories of cavity dressings.
PolyMem Wic Silver Rope can effectively replace common categories of tunneling dressings, which include:

- ALGINATES
- HYDROGELS
- OTHER ROPEs
- FOAMS
- GAUZE

How it Works
PolyMem Wic (Figure A) and PolyMem Wic Silver (Figure B) cavity wound fillers are a hydrophilic polymeric membrane matrix with a pre-slit, perforated design that can be easily separated into three 1” (2.5 cm) wide strips to accommodate the wound bed size.

PolyMem Wic Silver Rope (Figure C) is made of the same hydrophilic polymeric membrane matrix but is reinforced with a medical grade mesh to enhance the strength of the dressing for use in deep tunneling wounds to assure easy and complete removal.

The membrane incorporates a mild, nonionic, nontoxic, tissue friendly cleansing agent that helps maintain a clean wound bed by loosening necrotic tissue, slough, bioburden and other debris. The hydrophilic polymeric membrane matrix, which includes a superabsorbent starch copolymer, draws fluid and debris from the wound bed and swells into a non-adherent gel encapsulated inside the dressing. As the exudate is being absorbed, the membrane matrix expands about one-third to fill the wound cavity. Additionally, glycerol (also known as glycerin) helps assure non-adherence to the wound bed so that the dressing can be removed without disturbing the wound bed or causing pain. Glycerol also controls odor while supporting autolytic debridement.
PolyMem Wic, PolyMem Wic Silver Configurations

PolyMem Wic cavity wound filler is available in 3” x 3” and 3” x 12” sheets and PolyMem Wic Silver in 3” x 3” sheets. PolyMem Wic and PolyMem Wic Silver are configured for use on wounds with shallow depths in combination with other dressings in order to increase absorption as well as wounds with cavities.

PolyMem Wic Silver Rope

PolyMem Wic Silver Rope is available in 0.4” x 14” (1 cm x 35 cm). PolyMem Wic Silver Rope is configured for use on tunneling wounds and can be applied using a facility supplied applicator stick (Figure D).

PolyMem Wic Silver Rope may be used as a cavity filler as well as tunnel filler by coiling the remaining dressing into the cavity (Figure E).

PolyMem Wic, PolyMem Wic Silver and PolyMem Wic Silver Rope are designed to function as a primary dressing. Therefore, the configurations come without the thin film backing found on other PolyMem dressings. You can use any of the other appropriate PolyMem or Shapes® by PolyMem configurations as your secondary dressing.
PolyMem Wic Wound Filler Benefits

**Fast Super Absorbent Wicking**
- Quickly absorbs and holds up to
  - 10 times weight (Wic and Wic Silver)
  - 6 times weight (Wic Silver Rope)
- Facilitates management of cavity wounds (Wic and Wic Silver) and tunneling wounds (Wic Silver Rope)
- Expands up to one-third as wound fluid is absorbed
- Soft and pliable, conforming to wound shape

**Non-adherent**
- Will not stick to the wound bed while maintaining integrity of healing tissue
- Will not dehydrate wound bed
- Easy, pain-free application and removal

**Continuous Cleansing**
- Reduces need to cleanse wound bed during dressing changes
- Minimizes pain and disruption of newly forming tissues often associated with wound bed cleansing

**Wide Range of Application**
- Perforated for ease of use (Wic only) and can be cut to size (All Wic products)
- Reinforced for added strength (Wic Silver Rope only)
- Will donate moisture or absorb exudate, depending on condition of wound bed and fluid level in dressing
- Clinician can add sterile water or saline to make the dressing a faster moisture donor, or can allow the dressing to draw fluid to the site as it absorbs fluid into the dressing
- Helps relieve wound pain and improve comfort
- Small particle silver provides an antimicrobial reservoir in the dressing (Wic Silver and Wic Silver Rope)

**Cost Effective**
- Saves time and supplies by usually eliminating the need to cleanse the wound bed during dressing changes
  - Dressing changes are easy - remove old dressing and apply new
  - Removes intact - no flushing or rinsing of debris is usually necessary
- Saves time and money by often reducing the number of dressing changes while extending the time between changes

**Indications for Use**
- Pressure ulcers (Stages III–IV)
- Vascular ulcers
- Diabetic ulcers
- Acute wounds

*Organisms tested included Klebsiella pneumoniae (ATCC# 4352), Pseudomonas aeruginosa (ATCC# 9027), Enterococcus faecalis (VRE) (ATCC# 51575), Candida albicans (ATCC# 10231), Staphylococcus aureus (MRSA) (ATCC# 33591) and Staphylococcus aureus (ATCC#8538). The organisms chosen demonstrate the antimicrobial actions of the silver formulation on relevant, representative organisms.*
