The Surg-e®-Doc™ offers the following advantages:

Extra Monopolar port
The Surg-e®-Doc™ offers the ability to utilize an extra monopolar port. This added versatility eliminates the need to change monopolar electrodes within the same handpiece during a procedure.

Simultaneous activation of Surg-e®-Vac™
The Surg-e®-Doc™ extends the life of the vacuum unit by automatically activating the Surg-e®-Vac™ only when the RF energy source is activated. Moreover, the Surg-e®-Vac™ will continue vacuuming for 5 seconds after the RF energy source is deactivated. This allows for automatic removal of residual plume.

Less Clutter
The Surg-e®-Doc™ eliminates the need for separate footswitch activation of Surg-e®-Vac™. This reduces clutter since the only footswitch needed is that of the RF energy source.

**ACe-Tip™** Advanced Composition Alloy

**ACe-Tip™** Technology Advantages:*  
- Minimal adherence of tissue  
- Low absorption  
- Tissue preservation

The **ellman®** **ACe-Tip™** electrodes are designed to reduce resistance/impedance which causes less undesired lateral heat compared to tungsten steel electrodes.

A 45% reduction in the zone of hyalinization has been demonstrated.†

**ACe-Tip™** electrodes glide smoothly through tissues and are excellent for sculpting and tissue shaping.
