

COLPOSCOPES

Optimum Configurations

Colpo-Master™ I

Low center of gravity increases stability, while EZ-Roll locking casters provide smooth gliding movement between exam rooms.

570-0145 includes 3-legged base as shown. Also available as 570-0147 with 5-legged base **(Recommended)**.

CS-8187

The new CS-8187** HDMI Camera featuring true Full HD 1932x1080 resolution connects to a standard HDMI port and doesn't require software or computer. SD card included for onboard storage. When done taking pictures or recording a video, simply remove the SD card and transfer files to your computer using USB adapter also included. This package is ideal for EMR/EHR programs. Pictures are also viewable on a monitor and can serve as an excellent educational tool.

Colpo-Master™ II*

This center-post colposcope is excellent for examinations and the five-legged base adds extra stability.

570-0149

Camera-Ready Trinocular head with (570-0223**) digital camera for the Colpo-Master II. Images can be downloaded to your computer for the EMR/EHR program with the 570-0223 software.

WHY HENRY SCHEIN® COLPOSCOPES ARE BETTER...

- **Optical Zoom Range** - Continuous zoom range of 4x - 27x; (an additional 7.5x magnification over competitor)
- **Eye Pieces** - 20x Super Widefield "High-Eyepoint" eyepieces, allows users with glasses to wear their glasses while using the Colposcope; eliminates eyestrain. The competitor's models require eyewear removal.
- **LED Illuminated** - LED models feature two independent Rheostats, one controls the white LED's (4), while the other controls a single green LED (AKA Green Filter) providing superior illumination control. Henry Schein LED's are far brighter.
- **Stainless Steel Focusing Handles (handlebars)** - Standard with all Henry Schein Colpo-Master I models
- **Bases** - Three (3) or five (5) legged base options, three-legged configuration has a lower center of gravity (crab stand design) offering greater stability.
- **Henry Schein Colposcope Cameras are Upgradeable/Interchangeable** - Cameras are detachable, may be removed for upgrade or service at any time. If the camera has a problem, simply detach and send back for service (or remove it for use on another piece of equipment such as a Hysteroscope); and you still have a functioning optical Colposcope to use in your practice (without the camera).
- **Video / Camera-Ready** - All Camera-Ready Trinocular models can accept "C" or "CS Mount" cameras from most manufacturers. Cameras are detachable; can be added to original purchase; or purchased any time later.
- **5.0 Mega Pixel Digital Camera available** - (570-0223) and Image Capture software for Windows 7 & 8, direct to computer. Images can be uploaded to EMR/EHR programs in JPEG format. Henry Schein cameras have a much higher resolution than the competitor. Camera packages come with an Elbow C-Mount Adapter with Diopter (independent focusing control) for attaching the camera to the head.
- **High resolution S-Video analog cameras available** - with an optional Frame Grabber with Image Capture software to convert the signal to a digital format so it can be saved into a computer for EMR/EHR systems
- **Pricing** - Henry Schein Colposcopes have a lower retail cost than comparable competitor models at manufacturer's suggested list prices. Henry Schein models with Video options can be 20-35% less than competitor depending on configuration.

COLPOSCOPE PROSPECTING - QUALIFYING QUESTIONS...

Q: Do you intend to perform exams only, or exams and procedures?

A: If you do procedures, unobstructed access to the patient is of paramount importance. In this case, we strongly recommend a Suspension Arm Colposcope. The optical head hangs suspended above which allows clear access to the patient; room to work with instruments and LEEP equipment, etc. If you not plan to do procedures, a Center Post Colposcope will not only be less expensive, it has a smaller footprint.

Q: Do you plan to use EMR/EHR programs and documentation now, or in the future?

A: If you plan to do EMR at any point, we recommend you start with one of our "Camera-Ready" Trinocular models. If you purchase a Binocular model, there is no way to add a camera at a later date. Instead, you would need to purchase an entirely new Camera-Ready head. The Camera-Ready models cost a little more than a Binocular model at the time of original purchase; however, they are significantly less than if you have to purchase later an entirely new Camera-Ready head later.

Q: What electrosurgical equipment are you using for your procedures?

A: Henry Schein offers the Specialist|PRO-G (A1250S-G) electrosurgical generator and smoke evacuator system designed for the GYN needs.

Henry Schein also offers an extensive line of loop and ball electrodes for your LLETZ procedures.

* S-Video analog cameras have through-the-eyepiece and monitor viewing capacity only and cannot capture images and record to a memory card or computer without CS-8023 Frame Grabber digital conversion accessory.

** Digital video cameras offer through-the-eyepiece and monitor viewing and can also record data to a computer. 570-0223 is computer and software dependent. CS-8187 is computer independent and can record in HD directly to a computer or SD card.
