

Self-Adherent Bandages

From A Name You Can Trust.

Henry Schein Self-Adherent Bandages are non-sterile and made from a porous material that allows wounds to breathe and heal properly. The self-adherent design makes application and removal easier as the bandage affixes to itself as opposed to the patient's skin.

Features & Benefits:

Designed and manufactured to provide strength, protection, and value.

- Comfortable, porous material
- Pain-free removal
- Bandage sticks to itself, not to skin, dressings, bedding, or clothing
- Applies light compression to the skin
- Easy to tear
- Does not require clips or fasteners
- Available in latex or latex-free materials
