The VASER DIFFERENCE
A major advance in the application of ultrasonic technology to cosmetic procedures. This system is specifically designed to preserve as much of the tissue matrix as possible, yet still remove the desired amount of fatty tissue.

Patients today are asking for laser-assisted lipolysis, or ‘laser lipo’: a highly effective, minimally invasive procedure that permanently eliminates fat cells with reduced downtime compared to traditional liposuction. Accent 980 is FDA approved for laser-assisted lipolysis, using the ideal wavelength for minimally invasive performance.

• Procedure is done under local anesthetic
• Safely and easily destroys fat cells.
• Provides simultaneous collagen stimulation for skin tightening and contouring, which reduces the need for a tuck or lift.
• Faster, easier and less traumatic aspiration process
• Less downtime and bruising for quick patient recovery: up and around in 24 to 48 hours.
• Produces high revenue and fuels demand for other laser procedures.

THE VASER AMPLIFIER delivers precise amplitude control in pulsed or continuous mode.

The VASER Handpiece facilitates precise contouring in all anatomical applications.

Small diameter, solid-grooved probes come in a range of diameters for precisely breaking apart small volumes of fat.

FAT GRAFTING: TISSU-TRAN

• Sterile, closed, non traumatic collection and filter of lipocytes.
• No centrifuge or large investment.

The Dominant 50 is a powerful and reliable hospital suction pump indicated for the aspiration and removal of surgical fluids, tissues (including bones), gases, bodily fluids, or infection materials from wounds of the patient during surgery.

• Powerful and high suction capacity
• Rapid buildup of vacuum
• Vibration-Free and quiet
• Design; smooth surface and easy to handle and clean
• Prized for its design, functionality, and ergonomics
