How Can Henry Schein Medical Help Your Ambulatory Surgery Center (ASC)?

We understand your unique needs and have the resources to support and deliver to your expectations.

Supporting Your Facility’s Every Need—Whether you perform minor surgical procedures in your office or you operate a freestanding, multi-specialty surgery center, Henry Schein Medical provides the products and services you rely upon to improve your center’s efficiency and profitability.

Partnering for Success—Our team of knowledgeable professionals can work with your team to achieve all of your business goals. Through our SurgiTeam Solutions Program, we have partnered with some of the strongest surgical supply manufacturers in the industry, offering a full line of support resources to address your facility’s activities.

About Henry Schein...

Henry Schein, Inc., the largest provider of health care products and services to office-based practitioners, is a Fortune 500® company and a member of the NASDAQ 100® Index. The Company is recognized for its excellent customer service and serves more than 700,000 customers worldwide.

Henry Schein Medical, the Company’s North American Medical Division is dedicated to providing customers with a superior experience through innovative, integrated solutions that enable the best quality patient care and enhance efficiency and productivity. Its offerings include everything from medical and surgical supplies; diagnostic tests; equipment; pharmaceuticals and injectables; and practice management/EHR software to a portfolio of value-added business solutions and services.

SurgiTeam Solutions Simplify Supply Coordination and Save Precious Time...

- Enhanced center workflow
- Improved surgical case throughput
- Clinical supply chain management
- Financial services and customized supply cost-management programs
- Technology to improve center performance
- One-stop shopping for convenience in ordering
- Quarterly business reviews
- Facility design and set-up program according to your specifications
- In-service educational programs
SurgiTeam Solutions provides you with the most innovative programs in the industry to optimize your supply chain and ensure your success.

We have formed the most powerful alliances in the industry to meet all of your daily needs and simplify your supply decisions. The SurgiTeam alliance encompasses a complete range of products as well as the most innovative programs to optimize your supply chain management, financial services, and the comprehensive setup of your facility.

SurgiTeam Solutions provides A SINGLE SOURCE FOR EVERYDAY SURGICAL PRODUCTS, including:

- Wide range of branded and generic pharmaceuticals
- Broad selection of manufacturers to meet your every need
- Distribution network that is second to none, featuring:
  - Reliable and customizable delivery of critical surgical products
  - Dedicated account representatives to develop solutions designed specifically for your center
  - Inventory-management solutions to drive efficiency and profitability
  - Comprehensive online ordering tools
  - Over 6,000 high-quality, cost-saving Henry Schein Brand Products

Plus...

- The latest technology and equipment options especially for ASC customers
- The best financing tools in the industry through Henry Schein Financial Services
- Contracting expertise including National Group Purchasing Organizations (GPOs) to give you the best value on your most commonly used items
- PRIVILEGES Rewards Program to earn points based on electronic purchases—redeemable for thousands of products

Guide to Infection Prevention for Outpatient Settings: Minimum Expectations for Safe Care

The Center for Disease Control and Prevention recently released an infection prevention guide for outpatient clinics. Below are excerpts from this guide, for the complete document, please visit http://www.cdc.gov/HAI/pdfs/guidelines/Ambulatory-Care-04-2011.pdf

The transition of healthcare delivery from acute care hospitals to outpatient (ambulatory care) settings, along with ongoing outbreaks and patient notification events, have demonstrated the need for greater understanding and implementation of basic infection prevention guidance. Guide to Infection Prevention in Outpatient Settings: Minimum Expectations for Safe Care distills existing infection prevention guidance from the Centers for Disease Control and Prevention (CDC) and the Healthcare Infection Control Practices Advisory Committee (HICPAC).

Over the past several decades, we have witnessed a significant shift in healthcare delivery from the acute, inpatient hospital setting to a variety of ambulatory and community-based settings. Ambulatory care is provided in hospital-based outpatient clinics, nonhospital-based clinics and physician offices, ambulatory surgical centers, and many other specialized settings. Americans have frequent encounters with ambulatory care. For example, more than three-quarters of all operations in the United States are performed on an outpatient basis. In addition, between 1995 and 2007, the average person made three visits each year to physician offices. By 2007, the total number of physician offices visits approached one billion. Vulnerable patient populations rely on frequent and intensive use of ambulatory care to maintain or improve their health. For example, each year more than one million cancer patients receive outpatient chemotherapy, radiation therapy, or both. It is critical that all of this care be provided under conditions that minimize or eliminate risks of healthcare-associated infections (HAI).

Compared to inpatient acute care settings, ambulatory care settings have traditionally lacked infrastructure and resources to support infection prevention and surveillance activities. While data describing risks for HAI are lacking for most ambulatory settings, numerous outbreak reports have described transmission of gram-negative and gram-positive bacteria, mycobacteria, viruses, and parasites. In many instances, outbreaks and other adverse events were associated with breakdowns in basic infection prevention procedures (e.g., reuse of syringes leading to transmission of bloodborne viruses).

All healthcare settings, regardless of the level of care provided, must make infection prevention a priority and must be equipped to observe Standard Precautions. The 2007 CDC and HICPAC Guideline for Isolation Precautions was a first attempt to provide recommendations that can be applied in all healthcare settings. The Guide presented here is based primarily upon elements of Standard Precautions from that guideline and represents the minimum infection prevention expectations for safe care in ambulatory care settings. It is intended for use by anyone needing information about general infection prevention measures in ambulatory care settings.

ADHERE TO STANDARD PRECAUTIONS

HAND HYGIENE
Key recommendations for hand hygiene in ambulatory care settings:
1. Key situations where hand hygiene should be performed include:
a. Before touching a patient, even if gloves will be worn
b. Before exiting the patient’s care area after touching the patient or the patient’s immediate environment
c. After contact with blood, bodily fluids or excretions, or wound dressings
d. Prior to performing an aseptic task (e.g., placing an IV, preparing an injection)
e. If hands will be moving from a contaminated-body site to a clean-body site during patient care
f. After glove removal
2. Use soap and water when hands are visibly soiled (e.g., blood, body fluids), or after caring for patients with known or suspected infectious diarrhea (e.g., Clostridium difficile, norovirus). Otherwise, the preferred method of hand decontamination is with an alcohol-based hand rub.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Key recommendations for use of PPE in ambulatory care settings:
1. Facilities should assure that sufficient and appropriate PPE is available and readily accessible to HCP
2. Educate all HCP on proper selection and use of PPE
3. Remove and discard PPE before leaving the patient’s room or area
4. Wear gloves for potential contact with blood, bodily fluids, mucous membranes, non-intact skin or contaminated equipment
   a. Do not wear the same pair of gloves for the care of more than one patient
   b. Do not wash gloves for the purpose of reuse
   c. Perform hand hygiene immediately after removing gloves
5. Wear a gown to protect skin and clothing during procedures or activities where contact with blood or bodily fluids is anticipated
   a. Do not wear the same gown for the care of more than one patient
6. Wear mouth, nose and eye protection during procedures that are likely to generate splashes or sprays of blood or other body fluids
7. Wear a surgical mask when placing a catheter or injecting material into epidural or subdural space
ADHERE TO STANDARD PRECAUTIONS

INJECTION SAFETY

Key recommendations for safe injection practices in ambulatory care settings:
1. Use aseptic technique when preparing and administering medications
2. Cleanse the access diaphragm of medication vials with 70% alcohol before inserting a device into the vial
3. Never administer medications from the same syringe to multiple patients, even if the needle is changed or the injection is administered through an intervening length of intravenous tubing
4. Do not reuse a syringe to enter a medication vial or solution
5. Do not administer medications from single-dose or single-use vials, ampoules, or bags or bottles of intravenous solution to more than one patient
6. Do not use fluid infusion or administration sets (e.g., intravenous tubing) for more than one patient
7. Dedicated multidose vials to a single patient whenever possible. If multidose vials will be used for more than one patient, they should be restricted to a centralized medication area and should not enter the immediate patient treatment area (e.g., operating room, patient room/cubicle)
8. Dispose of used syringes and needles at the point of use in a sharps container that is closable, puncture-resistant, and leak-proof.
9. Adhere to federal and state requirements for protection of HCP from exposure to bloodborne pathogens.

ENVIRONMENTAL CLEANING

Key recommendations for cleaning and disinfection of environmental surfaces in ambulatory care settings:
1. Establish policies and procedures for routine cleaning and disinfection of environmental surfaces in ambulatory care settings
   a. Focus on those surfaces in proximity to the patient and those that are frequently touched
2. Select EPA-registered disinfectants or detergents/disinfectants with label claims for use in healthcare
3. Follow manufacturer’s recommendations for use of cleaners and EPA-registered disinfectants (e.g., amount, dilution, contact time, safe use, and disposal)

MEDICAL EQUIPMENT

Key recommendations for cleaning, disinfection, and/or sterilization of medical equipment in ambulatory care settings:
1. Facilities should ensure that reusable medical equipment (e.g., blood glucose meters and other point-of-care devices, surgical instruments, endoscopes) is cleaned and reprocessed appropriately prior to use on another patient
2. Reusable medical equipment must be cleaned and reprocessed (disinfection or sterilization) and maintained according to the manufacturer’s instructions. If the manufacturer does not provide such instructions, the device may not be suitable for multipatient use
3. Assign responsibilities for reprocessing of medical equipment to HCP with appropriate training
   a. Maintain copies of the manufacturer’s instructions for reprocessing of equipment in use at the facility; post instructions at locations where reprocessing is performed
   b. Observe procedures to document competencies of HCP responsible for equipment reprocessing upon assignment of those duties, whenever new equipment is introduced, and on an ongoing periodic basis (e.g., quarterly)
4. Assure HCP have access to and wear appropriate PPE when handling and reprocessing contaminated patient equipment.

RESPIRATORY HYGIENE/COUGH ETIQUETTE

Key recommendations for Respiratory Hygiene/Cough Etiquette in ambulatory care settings:
1. Implement measures to contain respiratory secretions in patients and accompanying individuals who have signs and symptoms of a respiratory infection, beginning at point of entry to the facility and continuing throughout the duration of the visit
   a. Post signs at entrances with instructions to patients with symptoms of respiratory infection to:
      i. Cover their mouths/noses when coughing or sneezing
      ii. Use and dispose of tissues
      iii. Perform hand hygiene after hands have been in contact with respiratory secretions
   b. Provide tissues and no-touch receptacles for disposal of tissues
   c. Provide resources for performing hand hygiene in or near waiting areas
   d. Offer masks to coughing patients and other symptomatic persons upon entry to the facility
   e. Provide space and encourage persons with symptoms of respiratory infections to sit as far away from others as possible. If available, facilities may wish to place these patients in a separate area while waiting for care
2. Educate HCP on the importance of infection prevention measures to contain respiratory secretions to prevent the spread of respiratory pathogens when examining and caring for patients with signs and symptoms of a respiratory infection.
**Additional Considerations**

The majority of ambulatory care settings are not designed to implement all of the isolation practices and other Transmission-Based Precautions (e.g., Airborne Precautions for patients with suspected tuberculosis, measles or chicken pox) that are recommended for hospital settings. Specific syndromes involving diagnostic uncertainty (e.g., diarrhea, febrile respiratory illness, febrile rash) are routinely encountered in ambulatory settings and deserve appropriate triage. Facilities should develop and implement systems for early detection and management of potentially infectious patients at initial points of entry to the facility. To the extent possible, this includes prompt placement of such patients into a single-patient room and a systematic approach to transfer when appropriate. When arranging for patient transfer, facilities should inform the transporting agency and the accepting facility of the suspected infection type.

Do you have questions regarding the diagnostic, pharmaceutical and vaccine items that you purchase from Henry Schein? Need help finding a CPT code, package insert, or looking for brand to generic comparisons?

The Henry Schein DxRx Solutions Hotline provides information on the following topics for diagnostics, pharmaceuticals and vaccines:

- Indications and usage as provided on a package insert
- Package inserts
- Brand to generic comparisons
- CPT codes and J codes*

Henry Schein supplies **standard** as well as **custom** surgical procedure packs for healthcare practices across the United States. Henry Schein works directly with each of our customers to design a **comprehensive surgical supply solution** for their individual practices. SurgiTeam takes pride in being an integral part of solutions that deliver increased **cost savings**, greater **office efficiencies**, higher **profits** and **optimal patient results**.

At Henry Schein, we go beyond providing the **highest quality surgical components** at the most competitive prices. We work to understand your practice and help streamline your surgical preparation process so that you remain focused on your patients and your business. We start by working with you to identify the essential surgical components you actually use when serving your patients. Then, together with our manufacturer partner, we design a **truly customized surgical pack** that contains exactly the items you need for a specific procedure. From there, we identify ways to further maximize the cost efficiencies delivered by customized packs. Finally, we work with your staff to make supply management a simple, automated process with online ordering and just-in-time delivery; eliminating the extra workload of storing excess supplies and keeping up with inventory. We offer **unmatched industry experience** and every member of our team is committed to the goal of creating high-quality custom surgical packs and delivering value and efficiency to your practice.

- **SurgiTeam™** Packs are fully **CUSTOMIZED** to meet your exact surgical requirements.
- **SurgiTeam™** Packs **SAVE** your facility money by reducing direct supply costs and surgical set-up time.
- Design a **FREE** custom surgical pack for your facility today.

NEW Products!

**DISPOSABLE SKIN STAPLER**
- Specially designed for surgical skin suturing.
- Novel structure and application security.
- Quick speed of sewing up during the operation.
- Little histological reaction.
- Good wound matching and healing.
- Leaves a small surgical scar; no pain during removal.
- Enables you to not only work with higher efficiency but also assists in avoiding cross-infection effectively.

Skin Stapler, 35W  
(900-7010) .............Each

**SKIN STAPLE REMOVER**
Skin Staple Remover:  
Sterile. Disposable.  
(900-7011) .................Each

**Save on CLIA Compliance**
HENRY SCHEIN BRAND URINE CONTROLS AND PREGNANCY

For most brands of Urine Dip Sticks and Pregnancy Tests
- A bilevel product packaged in plastic tubes.
- Controls are liquid, ready to use, and are designed to validate urinalysis reagent strips and to control confirmatory test reagent tablets.
- Packaged in plastic dip tubes, convenient and easy to use.
- Long open- and closed-vial stability at 2°C–8°C for up to 90 days allows the user ample time to utilize the product before expiration, resulting in cost savings.
- Room-temperature storage is convenient for the point-of-care setting where 2°C–8°C storage can be less accessible.
- Control is assayed for most strips and readers.

(3 x 15 mL Normal)  (3 x 15 mL Abnormal)  
Dip Stick in Bottle  
(900-4991)

(2 x 25 mL Normal)  (2 x 25 Abnormal)  
Dropper Vial  
(900-4992)

(Note: the open vial stability on the dropper vial is 18 months, vs 90 days on the dipper)
Sutures

Polypropylene Blue Monofilament Nonabsorbable Surgical Sutures
18" Length
- Precision-honed needle: offers surgeon easier penetration and precise tracking
- Finely crafted swaged needles: tissue trauma is reduced because swaged needles are used only once and then discarded; dull needles are eliminated
- Sterile packaging: ensures sterility
- Unique, see-through packaging: permits positive identification without the necessity to touch or otherwise contaminate suture
- Wide assortment of suture material (Silk–Black Braided, Gut–Plain, Gut–Chromic, Polyester–Green Braided): practitioner can select from several suture materials

PGA (Polyglactic Acid) Absorbable Sutures
Compare to Vicryl®
% Circle, 18" Synthetic absorbable braided sutures have a smooth, low-friction coating that reduces tissue drag. They retain approximately 50% of their initial strength at 2 weeks and 20% at 3 weeks. PGA is ideal for skin and mucosa closings and can be used in most areas of the body.

Nylon Black Monofilament Nonabsorbable Surgical Sutures
18" Length
- Precision-honed needle: offers surgeon easier penetration and precise tracking
- Finely crafted swaged needles: tissue trauma is reduced because swaged needles are used only once and then discarded; dull needles are eliminated
- Sterile packaging: ensures sterility
- Unique, see-through packaging: permits positive identification without the necessity to touch or otherwise contaminate suture
- Wide assortment of suture material (Silk–Black Braided, Gut–Plain, Gut–Chromic, Polyester–Green Braided): practitioner can select from several suture materials

Plain Gut Absorbable Sutures
Superior Point: Needles are honed with a unique multiedged point to provide greater ease of penetration. Superior attachment: Needles are drilled for a seamless needle-suture juncture, providing a smoother transition with less tissue disruption. Superior packaging: Unique double-sterile barrier packaging ends costly waste.

HemaClear® an all-in-one surgical tourniquet...

- Exsanguinates
- Applies a sterile stockinette
- Creates an occlusion
- Gives the surgeon a larger bloodless surgical field

Not only is it simple, it’s cost effective!

HemaClear eliminates the need for:
- Tourniquet Cuff
- Tourniquet Machine
- Esmarch Bandage
- Webril
- Stockinette

Increased Surgical Field

AtmosAir Solutions in Healthcare Environments

AtmosAir systems use nature’s own cleaning method: Bi-Polar Ionization (negative and positive ions, or “activated oxygen clusters”) interact with oppositely charged contaminants and reduce particulates, eliminate VOCs and odors, and reduce airborne bacteria and germs.

**AtmosAir Potential Benefits**
- Superior reduction of particles and spores that can trigger allergy and asthma symptoms
- Proven reduction of Staphylococcus and related MRSA, and other microbials
- Continuous 24/7 use offers enhanced protection against mold, bacterial, allergies, germs, etc.
- Elimination of distracting odors in waiting rooms, emergency admissions, patient rooms, cafeterias, food service areas, soiled linen areas, trash storage areas, etc.
- Potential energy savings through reduced outside make-up air.
- Unmatched contaminant removal ability can allow enhanced IAQ without restrictions to airflow typical of filtration. Saves on HVAC operating costs.

**T400 Portable Unit**
can handle up to 400 sq/ft.
420-0005

**T400 Wall Mount**
can handle up to 400 sq/ft.
420-0004

**D100 in Duct System**
that can handle up to 2,000 sq/ft.
420-0006

**P2000 Portable Unit**
can handle up to 1,500 sq/ft.
420-0007

**P2000 Portable Unit**
can handle 1,500 sq/ft. for very odorous areas.
420-0007

Integra™ Miltex®

Silicone Coated Surgical Blades

Limit uncertainty with Integra™ Miltex® Silicone Coated Blades which provide a smooth, sharp edge for a precise incision while, at the same time, requiring less force.

The addition of silicone coating offers a significant improvement and smoother surgical incision performance when compared to traditional standard carbon or stainless steel blades.

- Each blade is packaged in a foil peel pack
- Blades are sterile, single-use with a 5-year shelf life
- Dispensing box of 100 blades

Contact Schein Medical or Miltex for more information, pricing or further assistance at 1.866.824.8300. Or e-mail us at customerservice.miltex@integra-life.com
