3M™ Scotchbond™ Universal Plus Adhesive

More than just a strong bond.

From excellent...

Built on the clinically proven and world’s most researched universal adhesive.

- All direct and indirect indications
  light-curing, self-curing or dual-curing methacrylate-based composites / cements
- All etching techniques
  total-etch, self-etch, and selective enamel etch
- Bonds to all restorative materials
  without the need for separate primers
- Available in vial and unit dose
  for efficient hygiene management
- Virtually no post-operative sensitivity
  in field evaluation:

  99% of dentists reported
  that 3M™ Scotchbond™ Universal Plus Adhesive shows virtually no post-operative sensitivity.*

...to exceptional

Formulation carefully optimized to achieve unique features.

- First radiopaque universal adhesive
  reducing the risk of X-ray misdiagnosis and invasive overtreatment
- Bonds and seals caries-affected dentin
  maximizing preservation of natural tooth structure, supporting minimally invasive preparation guidelines
- Gold standard adhesion to all dental substrates
  including glass ceramics
- Full dual- and self-cure compatibility
  no need for an additional dual-cure activator bottle
- BPA free formulation
  free of BPA derivatives like BisGMA
- Fully aligned system with 3M™ RelyX™ Universal Resin Cement
  excellent bond strength for virtually all resin cement indications. Adhesive cured by cement.

*Field evaluation with 309 dentists and over 20,000 applications
### Added radiopacity

On average, dentists see at least one hard to interpret X-ray per day due to radiolucency under an existing restoration. This could lead to misdiagnosis and invasive overtreatment. 3M™ Scotchbond™ Universal Plus Adhesive is the first radiopaque universal adhesive with dentin-like radiopacity, helping to overcome this issue.

Intentional adhesive pooling under Class I restorations – X-rays of extracted human molars, filling material 3M™ Filtek™ One Bulk Fill Restorative. 3M internal data, H. Loll et al., J Dent Res 99 (Spec Iss A): No. 757, 2020

"Radiolucent adhesive pooling underneath a restoration doubles the risk of restoration replacement."

Dr. John O. Burgess, University of Alabama, USA
