Dental Implant Overdenture Therapy: Current Concepts and Techniques

Dental implant overdenture therapy is a treatment modality with the potential of significantly improving the quality of our patient’s lives. In order to accomplish consistent and predictable treatment outcomes in general practice, an understanding of the fundamental principles of implant biomechanics, prosthetic, surgical and treatment planning considerations is required. Dr. Aldo Leopardi’s objective for this presentation is to bring all of these factors into perspective, through an understanding of the current literature and how this relates to clinical practice.

His discussion will include, but not be limited to:

- Treatment Planning.
- Prosthetic Design: stress broken versus rigid design concepts.
- Bar Overdentures.
- Stand-alone Attachment Systems: Zest Locator and Ball-abutment systems.
- Immediate versus delayed loading.

Date: Friday, June 17, 2011, 8:00 am – 4:00 pm
Continental breakfast and lunch provided

Location: Atlanta Marriott Northwest
200 Interstate North Parkway
Atlanta, GA 30339

Course fee: FREE!

CE Credits: 6 Credits

Registration: Please register by June 10, 2011 by contacting Curtis Fox: curtisfox@heraeus.com. As seating is limited, we encourage you to register early for this seminar.

Presenter: Dr. Aldo Leopardi, BDS, DDS, MS

Dr. Leopardi received his undergraduate dental degree from the University of Adelaide, South Australia, in 1984. He enjoyed private practice as a general dentist in Adelaide, Australia, for several years prior to receiving his specialist training and masters degree in combined fixed, removable and implant Prosthodontics, at the University of North Carolina, at Chapel Hill, in 1993.

In 1999, after 15 years of combined academic and dental practice, Dr. Leopardi resumed private practice limited to implant, fixed and removable Prosthodontics in Denver, Colorado. Today he lectures nationally on subjects involving fixed, removable and implant dentistry, and is involved in clinical research.
